

# Stamdata Products – Default & Recovery

## THE NORDIC DEFAULT & RECOVERY DATABASE

As the primary source of corporate actions and bond reference data in the Nordic Region, Stamdata leverages its position in the flow of information to create the complete Default & Recovery Database for the Nordic Region.

Every corporate action event gets evaluated and applicable events get described and merged into a dataset containing detailed issuer, security and event information.

### Information provided includes:

- All corporate action default and non-default events
- Recovery rates
- Standardized event description
- Twelve months trailing default rates

*The data is provided on Stamdata.com and the Stamdata Data Feed, easily configured for your financial system. The data can also be provided as CSV files for integration into spreadsheet applications.*

Stamdata applies common D&R methodology and a high level of standardized event description to create the most accurate and detailed D&R database in the Nordic Region.

## Key Benefits

### Key Data points:
